MASEN IS LAUNCHING A CALL FOR TENDERS FOR THE REPOWERING PROJECT OF THE KOU디아 AL BAIDA WIND PARK

Masen, in partnership with Futuren (a subsidiary of the EDF Renouvelables Group), is launching a call for tenders for the selection of an EPC constructor for the repowering project of the Koudia Al Baida wind farm, whose installed capacity will be brought to 120 MW.

Masen announces today the launch of a call for tenders dedicated to a wind energy project; the repowering of the Koudia Al Baida wind farm. The Koudia Al Baida Park, commissioned by ONEE in 2000 with a capacity of 50 MW, is the first wind farm in Morocco and in Africa. Through a new project, developed by Masen in partnership with Futuren (a subsidiary of the EDF Renouvelables Group), its capacity will be increased to 120MW. The use of repowering is a first in on both African and MENA region scales.

This repowering will involve the dismantling of existing turbines followed by their replacement with new generation, and higher performance turbines. This project is a further testimony of the close collaboration between Masen and ONEE in the development of the national renewable energy portfolio, in line with Masen's new prerogatives.

"We are the central player of sustainable energy in Morocco and have the ambition to become the African leader of these energies. It is therefore strategic for Masen to offer a wide range of services (depending on each ReN technology) at all the stages of a project cycle: pre-development, development, construction, operation and maintenance. This is what this project, wich we co-develop with Futuren, is about." says Mustapha Bakkoury, CEO of Masen.

The call for tenders is available on Masen's e-tendering platform (through the following link <https://masen.local-trust.com/>). All companies interested and meeting the criteria for the selection of an EPC contractor (Engineering, Procurement, Construction) as well as heavy maintenance and monitoring of the operation of the park are invited to participate.

As a reminder, Morocco has about 2300 MW of wind projects, including 11 wind farms, already in operation with an installed capacity of 1200 MW, and more than 1100 MW under construction or financial closure.

About Masen

Masen was founded in 2010 and is a major player in Morocco's overall energy strategy. The Company oversees implementation of the country's renewable energy program aiming to achieve 52 per cent of the national electricity mix from renewable sources, by 2030.

As manager of all integrated renewable energy project aspects ranging from generating electricity to contributing to the local economy and communities, Masen is transforming natural energy into power for progress.
